Mission & Vision

OUR MISSION

To deliver integrated AEC services that add measurable value to our clients, through innovative solutions, disciplined timelines, and cost structures that make quality accessible without compromise.

OUR VISION

Leading the next generation of AEC service delivery, globally recognized, digitally powered, and built around client outcomes.

Case Study Introduction

When a Nevada-based architectural firm reached out for support on their Las Vegas apartment project, the scope was broader than a typical visualization brief. Across 225,624 sq.ft. of multi-family development spanning Phases 2 and 3, the existing drawing set had coordination gaps and unresolved discrepancies that needed fixing before any design work could realistically move forward.

We stepped in, placed a **dedicated remote architect** directly within their team, and took ownership of both workstreams. On the documentation side, that meant auditing the **AutoCAD** drawing set, preparing a consolidated RFI list, and working through client mark-ups systematically until every drawing was accurate and coordinated. On the visualization side, it meant developing multiple LOD 200 façade options in **Revit**, exploring material and massing alternatives, and delivering photorealistic exterior and interior renders through **Lumion** that were ready for both permit submissions and marketing.

Project Engagement Model

For this project, we placed a dedicated remote architect directly within the client's team. Not as an external vendor sitting outside the process, but as an integrated resource working alongside their team in real time.

Scope of Project

The engagement covered end-to-end architectural documentation support, and design visualization for a multi-family apartment development in Las Vegas. Our dedicated remote architect reviewed and coordinated the existing 2D drawing set, identifying discrepancies and managing RFI resolution to ensure full documentation accuracy before advancing to the next phase.

Following documentation cleanup, the scope was extended to façade design development at LOD 200. Multiple design alternatives were explored with varied material, finish, and massing options for client review and approval. Once a design direction was confirmed, photorealistic exterior and interior renders were produced to meet both permit submission standards and marketing requirements.

The full scope was delivered within a single integrated workflow, spanning documentation coordination, BIM modeling, and final visualization, managed entirely by one dedicated remote architect.

Challenges Faced by the Client

The firm was managing multiple priorities with limited internal bandwidth. The drawing set had issues that were blocking progress, design decisions were stalled without clear visual references, and the deliverables needed to work on two fronts simultaneously.

Drawing Discrepancies & Coordination Gaps

Existing drawings had inconsistencies across documents that needed systematic correction before the project could advance to modelling.

No Visual Reference to Build From

Multiple façade and material options were required, but there was no existing visualization to work from, making the design decision process difficult for the client.

First-Time Documentation Involvement

This was our first engagement in the detailed documentation phase for this client, requiring fast onboarding and immediate clarity on project requirements.

Dual-Purpose Output Needed

The final renders had to meet both technical permit submission standards and marketing-grade quality within the same package.

Our Approach to the Challenge

We did not jump straight into modelling. The project needed a solid documentation foundation first, and that is exactly where we started. With one architect managing the full scope across documentation and visualization, every phase was sequenced deliberately with client sign-off before moving forward.

01

Structured Documentation Review

Audited existing drawings against submission comments, prepared a consolidated RFI list, and resolved all drawing conflicts before advancing to production.

02

Systematic Mark-Up Resolution

Incorporated all technical and graphical mark-ups directly into AutoCAD files, ensuring layer consistency and cross-document coordination throughout.

03

Multiple Façade Options, Iteratively Refined

Built LOD 200 façade models in Revit based on client references and U.S. architectural standards, exploring material and massing alternatives through structured review cycles.

04

Photorealistic Renders for Dual Use

Exported finalized Revit models into Lumion and delivered an exterior and interior render package suited for both permit submissions and marketing.

Project Execution Strategy

The project progressed through a structured, phase-gated delivery workflow. Each stage was completed and signed off before advancing to the next, ensuring documentation accuracy carried through into modeling and visualization without errors or rework. This approach allowed the client's internal team to review iterations quickly while maintaining full design continuity throughout.

Delivery Infrastructure

The engagement was supported through a structured remote delivery environment built for architectural practices. This delivery infrastructure ensured that documentation accuracy, design exploration, and visualization development progressed simultaneously without delays or rework.

- BIM production workflows aligned with U.S. documentation standards

- Dedicated coordination checkpoints at every documentation and design phase

- Iterative review cycles enabling rapid visualization updates without rework

- Single integrated toolchain ensuring seamless handoff between documentation and visualization

INPUT VS OUTPUT

What We Received

Existing 2D AutoCAD drawing set

Client submission comments & RFI inputs

Technical & graphical mark-ups

Design references & brief

Approved interior layouts & finish schedule

What We Delivered

Coordinated & corrected AutoCAD drawing set

Updated floor plans with resolved mark-ups

Construction-feasible Revit facade models

Multi-option material & massing studies

Photorealistic Lumion exterior & interior renders

Permit, approval & marketing-ready render package

Key Achievements

Resolved **cross-document discrepancies**, delivering a fully coordinated, submission-ready drawing set

Developed multiple **Revit-based** façade alternatives with varied **material and massing** options, accelerating design decisions

Produced **permit-standard** and **marketing-grade photorealistic** exterior and interior renders

Finalized a **construction-feasible** façade design through structured workflow and **iterative client review cycles**

Maintained a complete **RFI resolution log**, ensuring full documentation accuracy before advancing to visualization

Enabled **seamless progression** from documentation through Revit modeling to **final render delivery**

Client ROI & Cost Savings

ROI	No. of Resources	Per Resource Cost	Total Cost
 Hiring Full-Time Jr. Architect	1	\$9,842/month	\$9,842/month
 Hiring Dedicated Remote Architect	1	\$2,500/month	\$2,500/month

Cost Component	Full-Time Jr. Architect	Dedicated Remote Architect by VBS
Base Salary	\$6,167/month	\$2,500/month
Payroll Taxes (15%)	\$925/month	-
Health & Benefits	\$1,200/month	-
Software Licenses	\$500/month	Included
Office & Infrastructure	\$800/month	-
Recruitment & Onboarding	\$250/month	-
Total Monthly Cost	\$9,842/month	\$2,500/month

Savings = **\$7,342** / Month per head

Savings **4x**

What Makes Our Delivery Model Different

We do not operate as a typical outsourcing vendor. Our architects integrate directly into your workflow, work on your timezone, and function as an extension of your in-house team.

Top 1% US-Trained Architects

Rigorously vetted professionals
with hands-on experience
across U.S. architectural
standards and workflows

Ready to Integrate in 3 Days

Onboarded and productive
within your existing tools
and processes in under
72 hours

Working on Your Timezone

Full overlap with your team's
working hours for real-time
coordination and faster
turnaround

30 Days Risk-Free Trial

Start with zero commitment
and evaluate fit before
making a long-term
decision
